

# Geometric Interpretation of ML

---

# Introduction

---

## Steps:

- idea (elevator pitch)
- proof (formalize, existence, unique)
- compute (runtime, Big-O notation)
- useful (solves a real problem)

## Algorithm Development:

- generalization
- extension

# Introduction

---

## 1. Fit

1. Average
2. Linear regression
3. Piecewise linear regression
4. Logistic curve

## 2. Axis transformation

1. Logistic
2. PCA
3. SVM
4. Perceptron
5. Multilayer perceptron

## 3. Separation

1. LDA
2. SVM
3. Logistic Regression
